Wyoming Water Supply Outlook May 1, 1985

FOREWORD

HOW FORECASTS ARE MADE

Most of the snowfall accumulation in the western United States originates as snowfall. This snowfall accumulates right to the mountains during winter and early spring. As the snowpack accumulates, hydrologists estimate the runoff that will occur when it melts. Predictions are based on careful measurements of snow water equivalent at selected index points. Precipitation, temperature, soil moisture, and antecedent streamflow data are viewed in conjunction with snowpack data to prepare runoff forecasts. This report presents a comprehensive picture of water supply outlook conditions for areas dependent upon surface runoff. It includes selected streamflow forecasts, summarized snowpack and precipitation data, reservoir storage data, and narratives describing current conditions.

Streamflow forecasts are cooperatively generated by Soil Conservation Service and National Weather Service hydrologists. Forecasts become more accurate as more data affecting runoff becomes known. For this reason forecasts are issued that reflect three future precipitation conditions - Below Normal, Average, and Above Normal. These forecasts are termed reasonable minimum, most probable, and reasonable maximum. Actual streamflow can be expected to fall between the lower and upper forecast values eight out of ten years.

Snowpack data are obtained by using a combination of manual and automated measurement methods. Manual readings of snow depth and water equivalent are taken at locations called snow courses on a monthly or semi-monthly schedule during the winter. In addition, snow water equivalent, precipitation, temperature, and other parameters are monitored on a daily basis and transmitted via radio telemetry to central data collection facilities. Both monthly and daily data are used to project snowmelt runoff.

FOR MORE INFORMATION

Copies of Monthly Water Supply Outlook Reports and other reports may be obtained from the states listed below. Because of the limited space, snow survey measurements are not published in monthly reports. An annual snow survey data summary is published by the Soil Conservation Service for each of the western states. Historical snow survey data may be obtained at those same offices.

STATE	ADDRESS
Alaska	Room 129, 2221 East Northern Lights Blvd., Anchorage AK 99504
Arizona	Room 3008, Federal Bldg., 230 North First Ave., Phoenix AZ 85025
Colorado	2490 West 26th Ave., Denver CO 80211
(New Mexico)	
Idaho	304 North 8th Street, Room 443, Boise ID 83702
Montana	10 East Babcock, Room 443, Federal Building, Bozeman MT 59715
Nevada	50 South Virginia Street, Third Floor, Reno NV 89505
Oregon	1220 Southwest 3rd Ave., 16th Floor, Portland OR 97204
Utah	4418 Federal Bldg., 125 South State St., Salt Lake City UT 84147
Washington	360 U.S. Court House, Spokane WA 99201
Wyoming	Federal Bldg., Room 3124, 100 East 'B' St., Casper WY 82601

In addition to state reports, a Water Supply Outlook Report for the Western United States is published by the Soil Conservation Service and National Weather Service monthly, January through May. Reports may be obtained from the Soil Conservation Service, West National Technical Center, 511 Northwest Broadway, Room 514, Portland, OR 97209.

Published by other agencies:

Water Supply Outlook Reports prepared by other agencies include - Snow Survey Branch, California Department of Water Resources, P.O. Box 388, Sacramento, CA 95802; British Columbia - The Ministry of Environment, Water Investigations Branch, Parliament Buildings, Victoria, British Columbia, V8V 1X5; Yukon Territory - Department of Indian and Northern Affairs, Northern Operations Branch, 200 Range Road, Whitehorse, Yukon Territory, Y1A 3V1, Alberta, Saskatchewan, and N.W.T. - The Water Survey of Canada, Inland Waters Branch, 110-12 Avenue S.W., Calgary, Alberta, T3C 1A6.

STREAMFLOW PROSPECTS FOR WYOMING

Spring and Summer Period

May 1, 1985

LEGEND

1. Snake River Basin		>130%	Much Above Average
2. Upper Yellowstone and Madison River Basins		110%-130%	Above Average
3. Wind River Basin		90%-110%	Near Average
4. Bighorn River Basin		70%-90%	Below Average
5. Powder and Tongue River Basins		<70%	Much Below Average
6. Belle Fourche and Cheyenne River Basins			Not Forecast
7. Upper North Platte and Little Snake River Basins			
8. Lower North Platte, Sweetwater, and Laramie River Basins			
9. Upper Green River Basin			
10. Lower Green River Basin			
11. Upper Bear River Basin			

GENERAL OUTLOOK

AN EARLY SEASON OUTLOOK FOR ABUNDANT STREAMFLOW THIS SUMMER HAS WITHERED IN THE DRY TREND OF LATE WINTER AND HEAT OF EARLY SPRING. ONLY UNSEASONABLY HEAVY RAINFALLS CAN OVERCOME PRESENT DRYNESS.

SNOWPACK:

Only the North Platte drainage has escaped significant loss during April, finishing at 19 percent below average on May 1. The Powder River Basin is hardest hit with hot droughty weather slashing the April 1 snow at 27 percent below to a current 62 percent below normal. Other watersheds slipped by about 10 percent, leaving snowpacks of 19 to 38 percent below average. Only remnants of snowpacks remain below 9,000 feet elevation in the Wind and Big Horn Mountains.

PRECIPITATION:

April precipitation was greater than 50 percent below normal in many areas to near normal in extreme northwestern and southeastern Wyoming. A very dry area occurred from the Big Horn Mountains through the Wind River range. Less than 0.1 inch was received at Cody and Dubois and also at a few locations in the Green and Upper North Platte drainages. These amounts were greater than 90 percent below normal.

April recordings caused seasonal comparisons to continue to plunge. These statistics followed the April trend. The Big Horn and Wind drainages were very dry (25 to 75 percent below normal). The Yellowstone, Snake, Niobrara, and Lower North Platte were from 25 percent below to near normal. Elsewhere, comparisons range 25 to 50 percent below normal.

RESERVOIR STORAGE:

Abundant supplies are common in most of Wyoming's reservoirs, assuring ample supply for their uses this season. Seminoe is highest with over twice usual May 1 volume. Jackson Lake is very low during reconstruction work, and Fontenelle levels are being lowered in view of safety concerns.

STREAMFLOW FORECASTS:

The unusual winter dryness and early spring high temperatures have not only produced poor snowpacks, but are resulting in runoff peaking 2 to 4 weeks earlier than usual. Early summer streamflows for direct diversion may be very short as a result. April streamflows on the Upper Green have been three times normal, for example. With the exception of southwestern Wyoming, forecasts have remained stable or decreased as much as 30 percent compared to average of one month ago. Thirty percent below average forecasts cover the Big Horn Basin, while the North Platte continues at 10 to 14 percent below normal.

Snake River Basin

MOUNTAIN SNOWPACK*

*Based on selected stations

PRECIPITATION*

*Based on selected stations

WATER SUPPLY OUTLOOK:

Streamflow prospects have again diminished with another month of dry and hot weather precluding normal snowpacks. The 15 to 21 percent below normal forecasts can be improved by only very heavy spring rainfalls.

Jackson Lake is quite low during reconstruction, but Grassy and Palisades are well above usual.

SNAKE RIVER BASIN

STREAMFLOW FORECASTS

STREAMFLOW FORECAST POINT	THIS YEAR		Streamflow Forecast Period	PAST RECORD	
	1,000 Ac-Ft.	Pct. Ave.		1,000 Acre-Feet	
				Last Yr. xx	Average +
SNAKE RIVER near Moran (1)	750	85	April-Sept.		880

Jackson Lake	624.4	75.0	498.5	517.6
Palisades	1,200.0	1147.6	657.2	718.5

UPPER YELLOWSTONE AND MADISON RIVER BASINS

MAINTAIN SNOWPACK*

*Based on selected stations

PRECIPITATION*

*Based on selected stations

WATER SUPPLY OUTLOOK:

Snowpacks have diminished, resulting streamflows are to be about 20 percent below normal.

STREAMFLOW FORECASTS

(1) Observed flow plus change in storage in Hebgen Lake.
xx Measured flows for last year are U.S.G.S. provisional figures, subject to revision.
+ Period of average 1961-1980.

RESERVOIR STORAGE (Thousand Ac. Ft.)

River Basin and/or Sub-Watershed	No. Snow Site	This Yr. Water as Pct of Last Yr	Snow Average
Madison (in Wyoming)	12	91	77
Yellowstone	13	86	63

WIND RIVER BASIN

MOUNTAIN SNOWPACK*

*Based on selected stations

Maximum  Average 
Minimum  Current 

PRECIPITATION*

*Based on selected stations

Monthly precipitation  Year to date precipitation 

WATER SUPPLY OUTLOOK:

A very dry month has reduced snowpacks to one-half of usual. Forecasts of runoff continue, however, at about 25 percent below normal. Reservoir storage is very good.

WIND RIVER BASIN

STREAMFLOW FORECASTS

STREAMFLOW FORECAST POINT	THIS YEAR Forecast		Streamflow Forecast Period	PAST RECORD 1,000 Acre-Feet	
	1,000 Ac-Ft.	Pct. Ave.		Last Yr. xx	Average +
WIND RIVER near Dubois	85.0	80	April-Sept.		106
WIND RIVER at Riverton (1)	500	74	April-Sept.		678
WIND RIVER below Boysen (2)	890	77	April-Sept.		1,163
BULL LAKE CREEK near Lenore (3)	148	79	April-Sept.		188
LITTLE POPO AGIE near Lander	40.0	75	April-Sept.		53.0

- (1) Observed flow plus change in storage in Bull Lake, Pilot Butte Reservoir and diversion to Wyoming canal.
 (2) Observed flow plus change in storage in Bull Lake, Pilot Butte Reservoir, and Boysen Reservoir; plus diversion to Wyoming canal.
 (3) Observed flow plus change in storage in Bull Lake.
 xx Measured flows for last year are U.S.G.S. provisional figures, subject to revision.
 + Period of average 1961-1980.

SUMMARY of SNOW MEASUREMENTS

River Basin and/or Sub-Watershed	No. of Sites	This Yr. Snow Water as Pct. of	
		Last Yr	Average
Upper Wind River	9	58	50
Pogo Agie	3	41	57
Wind River above Boysen	16	48	51

RESERVOIR STORAGE (Thousand Ac. Ft.)

Reservoir	Usable Capacity	Usable Storage		
		This Year	Last Year	Ave.
Bull Lake	151.8	87.0	101.1	79.8
Pilot Butte	31.6	22.0	28.7	26.7
Boysen	549.9	291.0	299.5	250.1

BIGHORN RIVER BASIN

MOUNTAIN SNOWPACK*

*Based on selected stations

PRECIPITATION*

*Based on selected stations

WATER SUPPLY OUTLOOK:

Twenty-five to thirty-five percent below normal streamflows are expected in this very dry basin, based upon the poor snowpacks which are only one-half of usual for May 1. Abundant reservoir stored water will be available for this season's use.

BIGHORN RIVER BASIN

STREAMFLOW FORECASTS

STREAMFLOW FORECAST POINT	THIS YEAR Forecast		Streamflow Forecast Period	PAST RECORD 1,000 Acre-Feet	
	1,000 Ac-Ft.	Pct. Ave.		Last Yr.xx	Average +
WIND RIVER below Boysen Reservoir (1)	890	77	April-Sept.	1,163	
TENSLEEP CREEK near Tensleep	52.1	65e	April-Sept.	(Disc.)

		This Year	Last Year	Ave.
Boysen	549.9	291.0	299.5	250.1
Buffalo Bill	373.1	213.0	237.3	133.2
Bighorn Lake	1,356.0	851.8	849.2	633.1

POWDER AND TONGUE RIVER BASINS

MOUNTAIN SNOWPACK*

*Based on selected stations

PRECIPITATION*

*Based on selected stations

WATER SUPPLY OUTLOOK:

Little precipitation and hot weather have seriously eroded the mountain snowpack of water reserve (now at 62 percent below normal). Streamflows will likewise be reduced 30 to 40 percent below normal and will peak much earlier in the irrigation season.

STREAMFLOW FORECASTS

(1) Observed flow plus diversion to Highline Ditch.
xx Measured flows for last year are U.S.G.S. provisional figures, subject to revision.
+ Period of average 1961-1980.

RESERVOIR STORAGE (Thousand Ac. Ft.)

[illegible]

BELLE FOURCHE AND CHEYENNE RIVER BASINS

MOUNTAIN SNOWPACK*

*Based on selected stations

PRECIPITATION*

*Based on selected stations

WATER SUPPLY OUTLOOK:

Droughty trend of north and eastern Wyoming continues projecting early and reduced streamflows. Reservoir water users will have a good supply, however, this season.

BELLE FOURCHE & CHEYENNE RIVER WATERSHED

STREAMFLOW FORECASTS

0 STREAMFLOW FORECAST POINT	THIS YEAR Forecast		Streamflow Forecast Period	PAST RECORD 1,000 Acre-Feet

THE FOLLOWING ORGANIZATIONS COOPERATE
WITH THE SOIL CONSERVATION SERVICE
IN SNOW SURVEY WORK

State

Conservation Districts of Wyoming
State Engineer of Wyoming
Department of Water Resources of Nebraska
Irrigation Districts of Wyoming
University of Wyoming
 Department of Atmospheric Resources
 Department of Agricultural Engineering

Federal

U.S. Department of Agriculture
 Soil Conservation Service
 Forest Service

U.S. Department of Commerce
 NOAA, National Weather Service

U.S. Department of Interior
 Bureau of Reclamation
 Geological Survey
 National Park Service
 Bureau of Indian Affairs
 Bureau of Land Management

Private

Utah Power and Light Company
Eden Valley Irrigation District

Other organizations and individuals furnish information for the snow survey reports. Their cooperation is gratefully acknowledged.
